RESEARCH BACKGROUND

- **Deep Learning for Healthcare:** Leveraging deep learning models for medical and physiological data analysis, with applications in disease detection, health risk prediction, and continuous monitoring systems.
- **Edge Intelligence:** Developing lightweight, high-performance neural networks and exploring model optimization techniques to enable deployment on resource-constrained edge devices.
- **Computer Vision for Assistive Technologies:** Designing real-time perception systems, including object detection, semantic segmentation, and depth estimation, to enhance mobility and navigation.

EDUCATION

North South University, Bangladesh

Feb 2021 - Dec 2024

BSc Computer Science and Engineering | CGPA: 3.84/4

- Awarded 100% Merit Scholarship
- Graduated with *summa cum laude*
- Thesis: Visualization of Sorting Algorithms on a Mobile Application - A Study on Traditional vs Interactive Digital Tools, doi: [10.13140/RG.2.2.12458.17602](https://doi.org/10.13140/RG.2.2.12458.17602)
- Directed Research: Leveraging deep edge intelligence for real-time respiratory disease detection, doi: [10.1016/j.ceh.2025.01.001](https://doi.org/10.1016/j.ceh.2025.01.001)

EXPERIENCE

Research Assistant - Kuwait University | Kuwait

Jun 2025 - Present

Project I: Heat Stress Prediction using Open-Source Wearables

- Develop and optimize machine learning models for real-time heat stress prediction in the KU campus using physiological and environmental sensor data collected from Bangle.js 2 wearable devices.
- Review literature and draft research articles for journal and conference publications related to wearable health monitoring, heat stress prediction, and AI-based healthcare system

Project II: Modeling Ultrasound Waves using Physics-Informed ResNet Approximators

Research Grant: ZF01/25

June 2026 – Present

- Develop Physics-Informed Neural Networks (PINNs) and ResNet-based surrogate models for ultrasound wave propagation governed by partial differential equations (PDEs).
- Benchmark deep learning approximators against traditional Finite Difference Method (FDM) simulations.
- Extend modeling approaches toward realistic skull-image domains for biomedical ultrasound applications.

AI Specialist - Fidelity Technologies | Kuwait

May 2025 - Present

- Develop and maintain on-premise company AI assistant leveraging lightweight LLMs (HuggingFace, Ollama) for intelligent RAG (vector + bm25), and agents for multi task handling
- Integrate AI pipelines into existing content management systems to improve workload efficiency
- Design predictive machine learning solutions for enhanced analytics

Research Assistant - North South University | Bangladesh

Jan 2024 - Jan 2025

Research Grant: CTRG-23-SEPS-29

- Performed original research in the field of computer vision & edge intelligence; designed and trained deep learning algorithms for specific objects of interest, solving real-world problems
- Tested, evaluated, and optimized models for resource-constrained devices

Teaching Assistant - North South University | Bangladesh

Jun 2023 - Dec 2024

- CSE311 Database Management System, assessed SQL/MS-SQL projects and assignments
- Conducted tutorial sessions for students needing extra help outside of class hours

SKILLS

Programming Languages: Python, Java, Kotlin

AI & Machine Learning: TensorFlow, PyTorch, Pandas

LLMs: RAG, Ollama, HuggingFace

Databases: MySQL, MS-SQL, SQLite, PostGres

Others: Git, MS Office, LaTeX

Languages: English (IELTS 7.5), Bangla, Hindi
